

Git 5

Clean up in Git

Cleaning up in Git means preparing your local repository before pushing changes to the remote repository. This typically involves:

- Checking the repository status.
- Removing unwanted or temporary files (using .gitignore if needed).
- Committing all required changes.
- Ensuring your local branch is up to date with the remote branch.

Push back to Remote Git

Pushing to a remote repository uploads your local commits to a remote server (such as GitHub or GitLab) so that others can access the latest changes.

Output

```
MINGW64~/Users/monda/OneDrive/Desktop/conflict
remote:
To https://github.com/Rupam27-Mondal/merge_conflict.git
* [new branch]      master -> master
branch 'master' set up to track 'origin/master'.

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$ git branch -a
* master
  remotes/origin/master

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

nothing to commit, working tree clean

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$ git pull origin master
From https://github.com/Rupam27-Mondal/merge_conflict
* branch      master    -> FETCH_HEAD
Already up to date.

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$ git push origin master
Everything up-to-date

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$ git log --oneline
77817d6 (HEAD -> master, origin/master) final
17fb018 main
8054d7a hello branch
9cff8c3 master

Rupam@Rupam MINGW64 ~/OneDrive/Desktop/conflict (master)
$
